<about>

</> About Me

I'm a Front-End Developer with 3 years of commercial experience building responsive, accessible, and user-centered web applications in the UK.

My technical work spans two digital agencies, where I've delivered projects across React, Next.js, TypeScript, the TALL stack, headless CMS architecture, and API integrations. I enjoy working across the full front-end spectrum, from building reusable component libraries to developing custom CMS add-ons and integrating third-party services.

My path into tech isn't conventional. I co-founded and managed a technology company in Brazil for over five years, which gave me a commercial mindset and a genuine understanding of what software needs to do beyond looking good.

After relocating to the UK, I transitioned fully into development, completing an intensive bootcamp, volunteering as a mentor in the **Technovation Challenge** to support girls building socially impactful apps, and landing my first developer role within a year.

I build things outside of work too. I'm currently developing a freelance booking platform with React, Supabase and Stripe, and Job Tracker, an AI-powered job application tool that integrates the Claude API for real-time CV adaptation, cover letter generation, and job match scoring.

I care about code that's clean, maintainable, and built for real people.

Human.exe skills:

- + Attention to Detail
- + Team Collaboration
- + Creative Problem-Solving
- + Empathy & User Focus
- + Adaptability
- + Clear Communication
